FCC,

These are SBC, Sprint, AT+T, MSN, Comcast, T-Mobile change must have same all telephones's bill to connect VRS and separate TV and computer. Computer high speed DSL can see clear screen picture good sharp bright not blurred that like Window XP, Microsoft Computer and TV computer by ADA Law.

They are trying to use that ADA laws to make the telephone companies all use the same VRS connections, so that a deaf person can use VRS to call without having compatibility problems.

For example if a hearing person uses SBC phone services, she can call someone with AT&T phone service and has no problems. A deaf person using VRS can't do the same thing because SBC & AT& use different technology to do same thing.

Thanks,

Joan
